

Bodegas y Viñedos Ilurce

Rio Madre Rosé

Grape varieties 100% Garnacha

Soil Alluvial, rocky soils deposited by the Ebro River and reinforced by runoff from the Sierra de Yerga. The soils are sandy or clayey in texture and have a high proportion of iron. Unlike northwestern Rioja, the soils have low levels of calcium.

For over 100 years, the Escudero family has farmed authentic and traditional vineyards in Rioja. The family produces one of the most unique Rosés in Spain. The Mediterranean climate results in a rich and concentrated wine balanced by juicy freshness and bright aromas.
